

HÜPPE EasyFlat Shower Surface

# Stone Meets Design

## NATURALLY dimensionally stable and solid – made of natural stone material

We rely on a particularly hard natural stone material for our shower surfaces. As a result, the shower surface is extremely dimensionally stable, rigid and torsionally stiff. Even large dimensions do not produce any warping. Arguments, in fact, which are appreciated by home owners and property planners.

The HÜPPE mineral cast consists mainly of quartz grit, quartz sand, resin and hardener. The heat-storage properties of the material make the HÜPPE EasyFlat especially kind to the skin and pleasant to walk on. When stepping onto the shower surface, you feel a kind of soft warmth under your feet. Moreover, the natural stone material minimizes noise – no loud splashing heard here as with a steel tray.

## NATURALLY HÜPPE – Shower and Soul

For over 50 years we have been passionately impressing contractors, architects, wholesalers and installers with our shower innovations, design and well thought-out solutions. Our long-track record in development and production of shower surfaces of natural stone material is now to be seen in the new extra-flat shower surface:

### **HÜPPE EasyFlat.**

Made of high-grade mineral cast and with an integrated draining cap, HÜPPE EasyFlat is completely flat and with entry unimpeded. It is precision-fitted with our EasyEntry shower enclosures for a shower experience of true inspiration.

## NATURALLY flat and with entry unimpeded

Being clean-lined and restrained, HÜPPE EasyFlat adapts to the design lines of up-to-date bathrooms. In this, the extremely flat shower surface with its draining cover provides an optical unit. This not only looks good but also ensures absolutely unimpeded entry. Good news for all older customers and those with mobility restrictions: HÜPPE EasyFlat also comes with the optional anti-slip HÜPPE EasyProtect surface finish (Slip Category C).

## NATURALLY attractive and durable

Something incomparable occurs when stone meets design – the high-grade, luxurious appearance of the natural stone material represents a design statement in any up-to-date bathroom. Here is where HÜPPE EasyFlat in classic white matches the gleaming surfaces of the usual bathroom ceramics to perfection. HÜPPE EasyFlat also comes over really well in combination with many trends in tiles. Thus, the shower surface is available not only in white but also in fawn matt, grey matt, anthracite matt and white matt.

As the mineral cast is of high strength, it is durable in the extreme. If slightly damaged or scratched, the shower surface can easily be touched up with polish or with the HÜPPE EasyRepair repair set.

## **NATURALLY** seamless and hygienic

HÜPPE EasyFlat is not only an optical highlight thanks to its completely flat draining cover, but is also especially easy to clean. Shower surface and cover are coated with an easy-to-care-for gelcoat. This material from the yacht building industry provides considerable resistance to abrasion and wear. An added benefit of the smooth structure is in stopping bacteria and fungus penetrating the surface.

## **NATURALLY** installed easily and safely

Depending on what is wanted, the shower surface can be placed on feet, a base or simply straight onto a level floor prepared for this purpose (e.g. screed) or can be installed flush with the floor.

## **NATURALLY** complete with all accessories

We provide installers with the right feet and bases according to the installation involved. The HÜPPE vacuum lifting pad makes it very easy to install shower surfaces of natural stone material.
